From BABYLON to SUDBURY

Drain tile of burnt clay still in good state of preservation have been recovered from the ruins of Babylon.

Ontario’s newest city, being well engineered, has thousands of feet of sanitary sewers constructed of VITRIFIED CLAY PIPE

which is still the best material, universally recommended by the engineering profession for sanitary sewers because it:

Will not corrode
Will not disintegrate
Is impervious to manufacturing or domestic wastes
Has no adequate substitute
Is everlasting
Is used for sewers by every well engineered city in the world
Is cheapest in the long run

One of the huge smelters at Sudbury
