Notes:

1. Where the larger arch rests upon the smaller arch it shall be built of three layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.

2. The small arches shall be built of four layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.

3. The arches shall be built of four layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.

4. The arches shall be built of four layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.

5. The arches shall be built of four layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.

6. The arches shall be built of four layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.

7. The arches shall be built of four layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.

8. The arches shall be built of four layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.

9. The arches shall be built of four layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.

10. The arches shall be built of four layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.

11. The arches shall be built of four layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.

12. The arches shall be built of four layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.

13. The arches shall be built of four layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.

14. The arches shall be built of four layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.

15. The arches shall be built of four layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.

16. The arches shall be built of four layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.

17. The arches shall be built of four layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.

18. The arches shall be built of four layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.

19. The arches shall be built of four layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.

20. The arches shall be built of four layers of brick, the third layer being laid to form a lynch for the larger arch. The layers shall be of the same thickness.
