STANDARD FLUSH TANK
PROVIDED WITH
THE MILLER-POTTER AUTOMATIC SIPHON
SCALE 1"=1'

Notes:
A connection with the nearest watermain unless said watermain be more than 200' distant, is considered as being a part of Flushing Apparatus, the connecting pipe to be ¾" standard galvanized iron pipe with a ¾" rough lever handle hose bib attached.

In cases where Flush Tanks exceed the height shown in this plan it is understood that the full diameter of five (5) feet may be maintained to a point 4' 6" below the grade of the street.

For design of mantle frame and cover, and bucket, see plan No. 25433.
