STANDARD
SINGLE AND DOUBLE FLUSH-TANK
FOR
EIGHT INCH SEWER

SCALE: ONE FOOT TO ONE INCH.

Los Angeles City: Oct 1885
J. Schneebeli - City Engineer

NOTE
Concrete should be composed of one part of cement, two parts of sand, and three parts of broken rock from the side of a pipe, but can include gravel.

Concrete with lime mortar should consist of one part of lime, one part of sand, and two parts of broken rock. The amount of lime to be used should be determined in proportion with the size of the sewer, and the mortar should be well mixed.

Cements: The pipe shall be furnished with cement for the ends, after it has been removed from the mold. The covering shall be three feet square, with the top and bottom of the cover three feet square, and the sides six inches square.
